

Phenomenal Aire

Cold Plasma Generator Technology

Homeowner says "Lights Out" for HVAC

The Morris Jenkins Company recently installed a *Phenomenal Aire* Series R CPG unit in the home of Tom Barnette. Mr. Barnette had been using UV technology in his home's HVAC system. He was unsatisfied with the performance and ongoing costs of maintaining the technology. Mr. Barnette chose to install *Phenomenal Aire* and was so satisfied with its performance he sent TPI a personal testimonial.

"I had been using a UV-C Light, but didn't like it for several reasons. (1) My HVAC system emitted an odor and (2) it was costing too much to replace every year. I was kind of skeptical about the Phenomenal Aire product when it was presented to me by my HVAC service company, Morris Jenkins. I had never heard of Phenomenal Aire before, so while Michael performed a routine system service, I read over the brochure he handed me and then I checked out your website. I was impressed and considering if it would do what it says it would do, it would beat the price of replacing a UV-C light every year and comparatively would pay for itself in four years. So I told my HVAC tech Michael to install Phenomenal Aire unit and I would try it for 30 days. If I wasn't satisfied with it he could remove it and refund my money, but I would not buy another UV-C light. I never asked for a refund and I am extremely satisfied with the performance of the Phenomenal Aire product. My wife never complains about any odors in the house and when people ask me what the air smells like, I tell them it smells like nothing".

By design, Phenomenal Aire CPG units destroy bacteria, mold, airborne pathogens and removes odor from the air we breathe.

Phenomenal Aire is easy to install in residential HVAC systems, requires no maintenance and requires no scheduled replacement of parts.
