

MedAllies Mail™

Connecting the entire clinical neighborhood

A feature of MedAllies Direct Solutions™, MedAllies Mail™ v.1.0 provides a secure method for providers to communicate with health care organizations that are paper-based or using EHR systems that are not 2014 Meaningful Use certified. This Direct¹ medical email can be bundled with MedAllies Direct Solutions™ offerings or provided as a standalone option. It follows an email paradigm that meets Direct specifications. Like the broader MedAllies Direct Solutions™ offering, MedAllies Mail™ includes a provider directory that supports multiple Direct service addresses for any given health care provider, and relationships with any number of organizations and endpoints.

Through MedAllies Mail, customers can achieve comprehensive reach to the entire community or medical neighborhood, allowing for streamlined transitions of care even with organizations that are paper-based. By doing so, MedAllies Mail accelerates the path to Stage 2 Meaningful Use (MU2) compliance for provider organizations in need of additional clinicians to meet transitions of care requirements.

Features

- ❖ Provider directory following the ONC/IHE specifications
- ❖ Fully Direct-compliant with technical specifications and accreditation
- ❖ Adheres to industry security standards and follows industry best practices to ensure privacy and confidentiality of information (triple accreditation by EHNAC-DirectTrust)
- ❖ Allows for identity-based access to control certain features/functions compliant with HIPAA/HITECH regulations
- ❖ Supports shared access to department inboxes, with selectable access-control privileges
- ❖ Enables end user to
 - customize views
 - edit preferences
 - easily reset password
 - create patient medical record folders to store documents
 - send information to any Direct-enabled provider

Cost

- ❖ \$180 per active user per year
- ❖ No minimum purchase required

Benefits

- ❖ Saves time by allowing viewing of C-CDAs [Consolidated-Clinical Document Architecture] documents and not having to download and open each attachment
- ❖ No additional equipment is needed: All that's required is Internet access and a browser; system is hosted and fully managed by MedAllies (SaaS model)
- ❖ Facilitates communication among providers and supporting staff
- ❖ Easy-to-use user interface requires minimal training
- ❖ Allows MU2 CEHRT [certified EHR technology] organizations to connect to paper-based and non-MU2 CEHRT systems; this facilitates meeting the 10 percent transitions-of-care measure from the **sending** provider organization.

MedAllies Direct Solutions™

Interoperability for all

Why MedAllies Mail Matters:

MedAllies Mail supports interoperability and transitions of care.

FOR: Health systems and practices seeking to qualify for Stage 2 Meaningful Use

Do you have trading partners who don't use certified EHRs?

Many long-term care facilities, mental health providers and other health care organizations don't use 2014 certified EHR technology. Many are paper-based. They can still be included in patient-centered medical neighborhood transition-of-care transactions via MedAllies Mail. Those same organizations would benefit from the standalone version to facilitate secure communications between their own facilities.

FOR: Health care organizations with a line of business that does not use EHRs

Do you have trading partners or lines of business that don't use certified EHRs?

You can deploy MedAllies Mail to provide true interoperability across organizations.

FOR: Health care organizations awaiting EHR updates

Is your organization waiting for your vendor to update to 2014 certified EHR technology?

You can deploy MedAllies Mail as an interim solution.
