

# False Spirea

*Sorbaria Sorbifolia* 'Sem'

❁ Spectacular show of vivid colour! Fern-like leaves unfurl with glorious shades of bright pinkish-red that lasts for weeks and weeks. Colour gradually changes to shades of soft lime and chartreuse-green with tints of bronze-red on the young tips. In midsummer, the leaves turn completely green and form a backdrop for the creamy white plumes of spirea-like flowers above the foliage.

❁ Spreads by underground runners. Great for raised beds, foundation and mass plantings, large containers or as a specimen plant.

**Height: 3-4 Feet**
