

# 'Little Goblin Orange' Winterberry

*Ilex Verticillata 'NCIV2'*

- ❁ This female selection produces copious amounts of extra-large, bright orange berries. Smaller habit makes it much more landscape-friendly than other winterberry hollies. In order to get fruit, you will need to plant a male plant for pollination within 25 feet of the female
- ❁ Dark green foliage turns yellow / purple in fall
- ❁ Will also grow in moist soils and is deer resistant

**Height: 2-3 Feet**
