

LongRun Monthly Strategy Summary (6/30/2012)

Commentary

Let's get to the bad news right away. Not only were Absolute Return and Aggressive Growth down for the month of June, they have both been down four months in a row. For the second quarter, Absolute Return and Aggressive Growth were down 3.9% and 7.3% versus -2.8% for the S&P 500 and -3.0 for the Diversified Global benchmark. Nothing good about those numbers. However, this kind of losing streak has appeared in the historical test data for both strategies. Absolute Return had a five month losing streak from March through July in 2004 but otherwise had never had more than three losing months in a row. Aggressive Growth had had three different four month losing streaks (not counting this one).

The volatile, risk-on risk-off behavior of the markets this year has very tough on trend following strategies. Equity markets were up in Q1 and down in Q2. The positive equity performance in June was largely the result of a one-day rally on the 29th following word that European Union leaders had reached key agreements at their most recent summit. As you can see on the page 4, none of the 14 target assets have shown a consistent trend this year. US equities (SPY, MDY, IWM) and US real estate (VNQ) have been the best performers year-to-date, but only real estate had a positive return in the second quarter (and is in both portfolios as a result). All four fixed income ETFs turned in positive Q2 performance and make up the remainder of our positions for July. The implicit prediction is that bonds will outperform stocks even as interest rates are near all-time lows. It's a clear signal that many investors prefer the defensive nature of yield-oriented assets versus the perceived risk of equity markets.

The risk in equity markets has been underscored by a continuing flow of weak economic data from Europe, China and the US. Central banks in the UK, Europe and China have recently announced further plans for monetary easing. In the US, corporate earnings season will set market direction during July as we see not only who can meet or beat expectations for Q2 but what CEOs see for the rest of the year. Many Wall Street strategists now forecast the market to end the year lower. They've also reduced their recommended equity exposure to 49%, the lowest level since 1998. The trick here is that any consensus among Wall Street strategists tends to be wrong, meaning that it could be time to buy stocks rather than sell them.

If corporate outlooks are weak and stocks take a tumble, both the Fed and the Democrats will be motivated to take action. That could keep this muddle-through recovery on the right track. But if we tip over into a new recession (a distinct possibility), then bonds will be a safe haven as they were last year when Europe took us down in August. Right now, the evidence says that bonds and real estate are the place to be. When new cards are dealt, we will play our hand accordingly.

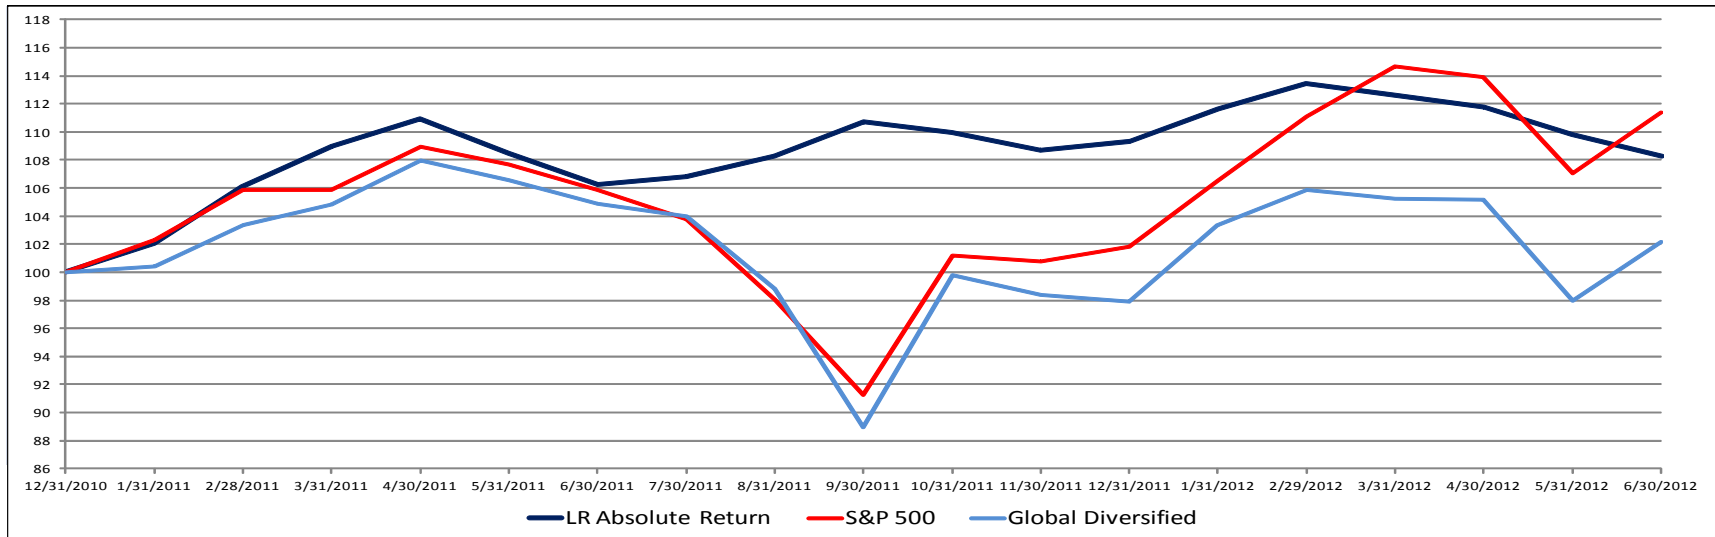

"I think as long as there are risks, there will be losses. If the day ever comes when there are no risks, there will also be no profits."
Robert Rubin, Former U.S. Treasury Secretary and Senior Partner at Goldman Sachs

LongRun Monthly Strategy Summary (6/30/2012)

LongRun Absolute Return Strategy

The Absolute Return strategy is designed to hold the top 4 of 14 constituent asset classes (see table on page 4) ranked by trailing 3-month total return. The portfolio is rebalanced monthly. If one or more of the top 4 assets has a negative three-month or one-month return, that allocation moves to cash as a way to limit downside exposure. Therefore, the strategy can be 100% in cash under adverse market conditions.

2011 Returns (%)

LongRun Monthly Strategy Summary (6/30/2012)

LongRun Aggressive Growth Strategy

The Aggressive Growth strategy always holds the top 3 of 14 constituent asset classes (see table on next page) ranked by 3-month total return. The portfolio is rebalanced monthly. Unlike the Absolute Return strategy, Aggressive Growth has no explicit downside protection feature, relying only on relative strength to position the portfolio. As a result, it will experience deeper drawdowns than Absolute Return.

LongRun Monthly Strategy Summary (6/30/2012)

LongRun Capital Management LLC

LongRun Capital Management LLC is an independent registered investment advisor founded in 2003 to provide investment management services to individuals, families, trusts and charitable entities. Our focus is the active management of investment portfolios to achieve a balance of return, risk and tax-efficiency that meets each client's specific objectives. The Absolute Return and Aggressive Growth strategies are part of a broader array of investment solutions that we make available to our clients depending upon their objectives and risk tolerance. All assets under management are held in separate accounts owned directly by our clients. Our Managing Partner, Jim Carroll, has more than 20 years of financial advisory and investment experience.

Investment Structure:	Separately Managed Accounts
Custodian:	Fidelity Investments
Minimum Investment:	\$500,000 (subject to waiver)
Lock-up:	None
Liquidity/Redemption:	At client request
Management fee:	1% to \$5 million; .75% above \$5 million
Disclosure:	Form ADV available upon request

Backtest of LongRun Risk-Managed Strategies

The results shown below represent a backtest of the LongRun Aggressive Growth and Absolute Return strategies from January 1, 1996 through December 31, 2010. Additional information is available upon request. Please review the important disclosures below and on the next page.

	S&P 500 (SPY)	Global Diversified¹	Aggressive Growth²	Absolute Return³
Compound Annual Return ⁴	6.6%	10.3%	17.2%	13.7%
Ending Value per \$1 ⁵	\$2.62	\$4.34	\$10.84	\$6.84
Multiple of S&P 500	NA	1.7	4.1	2.6
Standard Deviation ⁶	16%	15%	18%	13%
Maximum Drawdown ⁷	-51%	-45%	-35%	-13%
Overall Correlation ⁸	100%	85%	56%	46%
Up Market Correlation ⁹	100%	84%	56%	53%
Down Market Correlation ⁹	100%	88%	47%	21%
Up Capture ¹⁰	100%	90%	107%	74%
Down Capture ¹⁰	100%	76%	59%	37%
Up/Down Ratio ¹¹	1.0	1.2	1.8	2.0

Positive Monthly Returns	60%	64%	64%	68%
Batting Average ¹³	NA	58%	60%	56%

- Global Diversified is a benchmark that equally weights the 14 ETFs used in the risk-managed strategies, resulting in a global portfolio that is a 70/30 mix of equity and fixed income
- Aggressive Growth is a risk-managed strategy designed to achieve higher long-term returns for clients able to tolerate a significant amount of risk
- Absolute Return is a risk-managed strategy designed to strictly limit investment risk while producing attractive expected returns
- Annualized compound return from January 1, 1996 through December 31, 2010
- The estimated value of \$1 invested on January 1, 1996 through December 31, 2010
- Standard deviation is a statistical measure of the dispersion of investment returns around the average return; a higher standard deviation is commonly viewed as indicative of greater risk
- Drawdown is a measure of the worst peak to trough decline in portfolio value over a measured period; a higher drawdown is indicative of greater risk
- Correlation measures the degree to which one set of returns moves up and down in sync with a benchmark set of returns; the S&P 500 is used as the benchmark for this analysis
- Upmarket correlation analyzes only periods when benchmark returns are positive; downmarket vice versa; upmarket correlation higher than downmarket correlation indicates better risk-adjusted returns
- Up capture measures the degree to which an investment matches benchmark returns in an upmarket and vice versa for down capture
- An Up/Down Ratio greater than 1 indicates risk-adjusted outperformance versus the benchmark; a ratio of 2 or more indicates significant risk-adjusted outperformance
- Percent Positive Ratio measures the percentage of all holding periods from six months to five years that produced positive returns
- Batting average measures the percentage of months that the particular investment outperformed the benchmark (S&P 500)

See "Important Disclosures Regarding LongRun Capital Risk-Managed Strategies" for additional information that should be considered before making any investment

Important Disclosures Regarding LongRun Capital Risk-Managed Strategies

- Strategies:** Absolute Return and Aggressive Growth (the “Strategies”) are disciplined, rules-based tactical allocation strategies developed by LongRun Capital based on a quantitative methodology known as relative strength. Relative strength involves ranking a selected universe of potential investments based on recent rate of return and then allocating a portfolio to a subset of investments at the top of the performance ranking. The Strategies use a universe of 14 exchange-traded funds (ETFs). These 14 ETFs are ranked on 3-month total return. Absolute Return will hold the top 4 of the 14 ETFs unless one or more of those top 4 has a negative 3-month or 1-month return, in which case that allocation will be held in a cash-equivalent money market fund. This defensive rule may cause Absolute Return to be 100% in cash under adverse market conditions. Aggressive Growth will always hold the top 3 of the 14 ETFs. Holdings for each strategy are reviewed monthly based on 3-month relative strength rankings using month-end performance data. Any changes to the Strategies based on revised rankings are implemented on the first trading day of each month.
- ETF universe:** The 14 ETFs that serve as the selection menu for the Strategies were selected as representative of the global equity and fixed income asset classes that would commonly be used to construct a prudently diversified portfolio. These 14 ETFs will be held constant unless one or more cease trading in the future, in which case we will seek to use a reasonable substitute representing the same asset class. In addition, we may occasionally substitute an equivalent ETF as part of a tax loss harvesting strategy or to reduce transaction expenses. Clients will incur direct expenses associated with the purchase and sale of ETFs as well as the indirect expenses associated with management of the ETFs by their sponsors (e.g. iShares).
- Global Diversified Benchmark:** The S&P 500 is a benchmark commonly used as a proxy for the US equity market. As an alternative, we developed the Global Diversified benchmark to measure the performance of a portfolio that includes all 14 of the ETFs used in the models underlying each of the Strategies. The Global Diversified Benchmark assigns an equal weighting to each of the asset classes represented by the 14 ETFs and rebalances those weightings each month. The resulting portfolio is approximately 70% equity and 30% fixed income with approximately 40% allocated to US equities and 30% allocated to international equities.
- Backtest:** LongRun Capital constructed a backtest of the Strategies using a combination of the 14 ETF universe and mutual funds representing the same asset classes for time periods prior to the inception of the ETFs currently being used. The rule-sets used to determine the month-to-month holdings of the Strategies were applied consistently for the entire backtest period. As a result, there was no manager discretion involved in portfolio management. Backtest returns reflect the deduction of a 1% per annum management fee and an expense ratio of 0.15% per annum designed to approximate the transaction expenses associated with implementation of the Strategies. Underlying data has been obtained from sources believed to be reliable and we are not responsible for errors or omissions. The results achieved in actual accounts may vary from those that would be indicated from backtest results. Backtest performance of the strategies provides no guarantee of future results.
- Composite Results:** LongRun Capital is an independent investment advisory firm that manages assets on a discretionary basis. Clients may elect to have their assets managed on a customized basis and may utilize the Strategies for some or all of their assets managed by LongRun Capital. Unaudited composites for each of the Strategies were started on January 1, 2011, representing the performance of actual accounts assigned to the Strategies. Composites include those accounts with a value of at least \$250,000 fully invested in one of the Strategies. Composite returns are presented net of investment management fees and transaction expenses. LongRun Capital’s top management fee tier is 1% per annum. Internal fees and expenses associated with the ETFs are reflected in the price of each ETF. Dividends, income and capital gains are reinvested on a monthly basis when allocation changes are made. Past performance is no guarantee of future results. Information regarding LongRun Capital’s management fees and the value of assets included in the composite results is available upon request. In addition, LongRun Capital’s disclosure document, Form ADV Part 2A, is available online at www.adviserinfo.sec.gov or upon request.
