

## LongRun Monthly Strategy Summary (9/30/2012)

### Commentary

In last month's commentary I mentioned three major events that would steer the markets one direction or the other. As many of you know, we were the beneficiaries of a trifecta: an ECB plan for open-ended purchases of debt, approval by the German court of the European Stabilization Mechanism, and a surprisingly robust QE3 from our own Federal Reserve. As an added bonus, the Bank of Japan announced its own additional easing of monetary policy to keep pace with its peers. Equity markets around the world made a strong move higher before flattening out and giving back some of the gains. Even with the retracement, the S&P 500 finished the month up 2.5% and our broader Global Diversified benchmark was higher by 2.1%.

LongRun strategies were aggressively positioned and benefitted accordingly with Absolute Return up 3.0% and Aggressive Growth up 3.7%, both outperforming the benchmarks for the month. In what has been a rare occurrence in the highly volatile markets of the past two years, both portfolios kept the same holdings as we moved into October. That means that the "risk-on" trade will continue for at least another month.

I find it especially interesting (and unsettling) that QE3 was explicitly motivated by persistent lack of progress in reducing unemployment (a key Fed mandate) and the very faint pulse of whatever economic recovery we may be experiencing. So while the equity markets gave a big round of applause, the underlying conditions here at home may be falling in line with a widening recession in Europe and signs of slowing growth in Asia. "Don't fight the Fed" is an old Wall Street adage that has generally been good advice. Resistance seems particularly futile when you add the central banks of Europe, Japan, England, China and Switzerland. At the same time, history is clear that massive monetary interventions have never been unwound without major collateral damage in the form of serious inflation.

The markets remind me of former Citibank CEO Chuck Prince's quote about subprime mortgages: "We have to keep dancing until the music stops." That's pretty much what money managers have to do right now. My plan is to just make sure we have a clear path to the nearest exit, something the Absolute Return strategy is specifically designed to do.

"The world of finance hails the invention of the wheel over and over again, often in a slightly more unstable version." **John Kenneth Galbraith**

## LongRun Monthly Strategy Summary (9/30/2012)

### LongRun Absolute Return Strategy

The Absolute Return strategy is designed to hold the top 4 of 14 constituent asset classes (see table on page 4) ranked by trailing 3-month total return. The portfolio is rebalanced monthly. If one or more of the top 4 assets has a negative three-month or one-month return, that allocation moves to cash as a way to limit downside exposure. Therefore, the strategy can be 100% in cash under adverse market conditions.

## LongRun Monthly Strategy Summary (9/30/2012)

### LongRun Aggressive Growth Strategy

The Aggressive Growth strategy always holds the top 3 of 14 constituent asset classes (see table on next page) ranked by 3-month total return. The portfolio is rebalanced monthly. Unlike the Absolute Return strategy, Aggressive Growth has no explicit downside protection feature, relying only on relative strength to position the portfolio. As a result, it will experience deeper drawdowns than Absolute Return.

## LongRun Monthly Strategy Summary (9/30/2012)

### LongRun Capital Management LLC

*LongRun Capital Management LLC is an independent registered investment advisor founded in 2003 to provide investment management services to individuals, families, trusts and charitable entities. Our focus is the active management of investment portfolios to achieve a balance of return, risk and tax-efficiency that meets each client's specific objectives. The Absolute Return and Aggressive Growth strategies are part of a broader array of investment solutions that we make available to our clients depending upon their objectives and risk tolerance. All assets under management are held in separate accounts owned directly by our clients. Our Managing Partner, Jim Carroll, has more than 20 years of financial advisory and investment experience.*

|                       |   |
|-----------------------|---|
| Investment Structure: | Separately Managed Accounts               |
| Custodian:            | Fidelity Investments                      |
| Minimum Investment:   | \$1,000,000 (subject to waiver)           |
| Lock-up:              | None                                      |

| Batting Average <sup>13</sup>        | NA                                 | 58%   | 60%  | 56%  |

- Global Diversified is a benchmark that equally weights the 14 ETFs used in the risk-managed strategies, resulting in a global portfolio that is a 70/30 mix of equity and fixed income
- Aggressive Growth is a risk-managed strategy designed to achieve higher long-term returns for clients able to tolerate a significant amount of risk
- Absolute Return is a risk-managed strategy designed to strictly limit investment risk while producing attractive expected returns
- Annualized compound return from January 1, 1996 through December 31, 2010
- The estimated value of \$1 invested on January 1, 1996 through December 31, 2010
- Standard deviation is a statistical measure of the dispersion of investment returns around the average return; a higher standard deviation is commonly viewed as indicative of greater risk
- Drawdown is a measure of the worst peak to trough decline in portfolio value over a measured period; a higher drawdown is indicative of greater risk
- Correlation measures the degree to which one set of returns moves up and down in sync with a benchmark set of returns; the S&P 500 is used as the benchmark for this analysis
- Upmarket correlation analyzes only periods when benchmark returns are positive; downmarket vice versa; upmarket correlation higher than downmarket correlation indicates better risk-adjusted returns
- Up capture measures the degree to which an investment matches benchmark returns in an upmarket and vice versa for down capture
- An Up/Down Ratio greater than 1 indicates risk-adjusted outperformance versus the benchmark; a ratio of 2 or more indicates significant risk-adjusted outperformance
- Percent Positive Ratio measures the percentage of all holding periods from six months to five years that produced positive returns
- Batting average measures the percentage of months that the particular investment outperformed the benchmark (S&P 500)

**See "Important Disclosures Regarding LongRun Capital Risk-Managed Strategies" for additional information that should be considered before making any investment**

## Important Disclosures Regarding LongRun Capital Risk-Managed Strategies

- Strategies:** Absolute Return and Aggressive Growth (the “Strategies”) are disciplined, rules-based tactical allocation strategies developed by LongRun Capital based on a quantitative methodology known as relative strength. Relative strength involves ranking a selected universe of potential investments based on recent rate of return and then allocating a portfolio to a subset of investments at the top of the performance ranking. The Strategies use a universe of 14 exchange-traded funds (ETFs). These 14 ETFs are ranked on 3-month total return. Absolute Return will hold the top 4 of the 14 ETFs unless one or more of those top 4 has a negative 3-month or 1-month return, in which case that allocation will be held in a cash-equivalent money market fund. This defensive rule may cause Absolute Return to be 100% in cash under adverse market conditions. Aggressive Growth will always hold the top 3 of the 14 ETFs. Holdings for each strategy are reviewed monthly based on 3-month relative strength rankings using month-end performance data. Any changes to the Strategies based on revised rankings are implemented on the first trading day of each month.
- ETF universe:** The 14 ETFs that serve as the selection menu for the Strategies were selected as representative of the global equity and fixed income asset classes that would commonly be used to construct a prudently diversified portfolio. These 14 ETFs will be held constant unless one or more cease trading in the future, in which case we will seek to use a reasonable substitute representing the same asset class. In addition, we may occasionally substitute an equivalent ETF as part of a tax loss harvesting strategy or to reduce transaction expenses. Clients will incur direct expenses associated with the purchase and sale of ETFs as well as the indirect expenses associated with management of the ETFs by their sponsors (e.g. iShares).
- Global Diversified Benchmark:** The S&P 500 is a benchmark commonly used as a proxy for the US equity market. As an alternative, we developed the Global Diversified benchmark to measure the performance of a portfolio that includes all 14 of the ETFs used in the models underlying each of the Strategies. The Global Diversified Benchmark assigns an equal weighting to each of the asset classes represented by the 14 ETFs and rebalances those weightings each month. The resulting portfolio is approximately 70% equity and 30% fixed income with approximately 40% allocated to US equities and 30% allocated to international equities.
- Backtest:** LongRun Capital constructed a backtest of the Strategies using a combination of the 14 ETF universe and mutual funds representing the same asset classes for time periods prior to the inception of the ETFs currently being used. The rule-sets used to determine the month-to-month holdings of the Strategies were applied consistently for the entire backtest period. As a result, there was no manager discretion involved in portfolio management. Backtest returns reflect the deduction of a 1% per annum management fee and an expense ratio of 0.15% per annum designed to approximate the transaction expenses associated with implementation of the Strategies. Underlying data has been obtained from sources believed to be reliable and we are not responsible for errors or omissions. The results achieved in actual accounts may vary from those that would be indicated from backtest results. Backtest performance of the strategies provides no guarantee of future results.
- Composite Results:** LongRun Capital is an independent investment advisory firm that manages assets on a discretionary basis. Clients may elect to have their assets managed on a customized basis and may utilize the Strategies for some or all of their assets managed by LongRun Capital. Unaudited composites for each of the Strategies were started on January 1, 2011, representing the performance of actual accounts assigned to the Strategies. Composites include those accounts with a value of at least \$250,000 fully invested in one of the Strategies. Composite returns are presented net of investment management fees and transaction expenses. LongRun Capital’s top management fee tier is 1% per annum. Internal fees and expenses associated with the ETFs are reflected in the price of each ETF. Dividends, income and capital gains are reinvested on a monthly basis when allocation changes are made. Past performance is no guarantee of future results. Information regarding LongRun Capital’s management fees and the value of assets included in the composite results is available upon request. In addition, LongRun Capital’s disclosure document, Form ADV Part 2A, is available online at [www.adviserinfo.sec.gov](http://www.adviserinfo.sec.gov) or upon request.
