

## LongRun Monthly Strategy Summary (1/31/2013)

### Commentary

January was another “risk-on” month for most equity markets around the world with a big chunk of the gains on the very first trading day thanks to Congressional action on the Fiscal Cliff. Any professional investor skeptical of this rally (i.e., underinvested) faces serious career risk. Historically, a good start to January has predicted a positive return for the full year more than 80% of the time. In addition, both the Dow and the S&P 500 are flirting with all-time highs and the Nasdaq has retaken its 2007 high (but not the all-time level reached in 2000). Do you want to risk missing out on all this?

Our strategies were fully “risk-on” in January and will be again in February. Unfortunately, the Absolute Return model underperformed last month with losing positions in emerging markets (EEM) and metals & mining (XME). XME has tormented us recently but is now off the radar. For February, Absolute Return dropped the two losers and added U.S. exposure to mid-cap (IJH) and small cap (IWM) stocks. We got our mid-cap exposure through IJH rather than MDY because they are perfect clones but we pay no commissions to buy IJH. Europe (VGK) and Asia Pacific ex-Japan (EPP) remain in the Absolute Return portfolio. Aggressive Growth fared better in January, not owning XME. That portfolio is now two-thirds U.S. equities, having dropped EPP and EEM in favor of IJH and IWM.

The S&P 500 soundly beat both of our strategies last year and again in January. I have my doubts about how long the S&P 500 (or any other single index) can sustain such performance. Our research shows that a diversified portfolio beats the S&P 500 over time (better return and less risk) and that both of our strategies beat a diversified portfolio. To be clear, my doubts are not part of the rule sets that drive our models and our portfolios will be managed by the rules. Even so, I find it useful to watch the markets for signs of potential opportunity or danger. Right now, I see more signs of danger. Later this week I will distribute a separate commentary to share what I’m seeing and why it might be important.

“Things alter for the worse spontaneously, if they be not altered for the better designedly.”  
**Francis Bacon, British author and statesman**

# LongRun Monthly Strategy Summary (1/31/2013)

## LongRun Capital Management LLC

*LongRun Capital Management LLC is an independent registered investment advisor founded in 2003 to provide investment management services to individuals, families, trusts and charitable entities. Our focus is the active management of investment portfolios to achieve a balance of return, risk and tax-efficiency that meets each client's specific objectives. The Absolute Return and Aggressive Growth strategies are part of a broader array of investment solutions that we make available to our clients depending upon their objectives and risk tolerance. All assets under management are held in separate accounts owned directly by our clients. Our Managing Partner, Jim Carroll, has more than 20 years of financial advisory and investment experience.*

<b>Investment Structure:</b>	<b>Separately Managed Accounts</b>

## Backtest of LongRun Risk-Managed Strategies

The results shown below represent a backtest of the LongRun Aggressive Growth and Absolute Return strategies from January 1, 1996 through December 31, 2010. Additional information is available upon request. Please review the important disclosures below and on the next page.

	S&P 500 (SPY)	Global Diversified <sup>1</sup>	Aggressive Growth <sup>2</sup>	Absolute Return <sup>3</sup>
Compound Annual Return <sup>4</sup>	6.6%	10.3%	17.2%	13.7%
Ending Value per \$1 <sup>5</sup>	\$2.62	\$4.34	\$10.84	\$6.84
Multiple of S&P 500	NA	1.7	4.1	2.6
Standard Deviation <sup>6</sup>	16%	15%	18%	13%
Maximum Drawdown <sup>7</sup>	-51%	-45%	-35%	-13%
Overall Correlation <sup>8</sup>	100%	85%	56%	46%
Up Market Correlation <sup>9</sup>	100%	84%	56%	53%
Down Market Correlation <sup>9</sup>	100%	88%	47%	21%
Up Capture <sup>10</sup>	100%	90%	107%	74%
Down Capture <sup>10</sup>	100%	76%	59%	37%
Up/Down Ratio <sup>11</sup>	1.0	1.2	1.8	2.0
Percent Positive Ratio <sup>12</sup>	62%	86%	91%	94%
Positive Monthly Returns	60%	64%	64%	68%
Batting Average <sup>13</sup>	NA	58%	60%	56%

- Global Diversified is a benchmark that equally weights the 14 ETFs used in the risk-managed strategies, resulting in a global portfolio that is a 70/30 mix of equity and fixed income
- Aggressive Growth is a risk-managed strategy designed to achieve higher long-term returns for clients able to tolerate a significant amount of risk
- Absolute Return is a risk-managed strategy designed to strictly limit investment risk while producing attractive expected returns
- Annualized compound return from January 1, 1996 through December 31, 2010
- The estimated value of \$1 invested on January 1, 1996 through December 31, 2010
- Standard deviation is a statistical measure of the dispersion of investment returns around the average return; a higher standard deviation is commonly viewed as indicative of greater risk
- Drawdown is a measure of the worst peak to trough decline in portfolio value over a measured period; a higher drawdown is indicative of greater risk
- Correlation measures the degree to which one set of returns moves up and down in sync with a benchmark set of returns; the S&P 500 is used as the benchmark for this analysis
- Upmarket correlation analyzes only periods when benchmark returns are positive; downmarket vice versa; upmarket correlation higher than downmarket correlation indicates better risk-adjusted returns
- Up capture measures the degree to which an investment matches benchmark returns in an upmarket and vice versa for down capture
- An Up/Down Ratio greater than 1 indicates risk-adjusted outperformance versus the benchmark; a ratio of 2 or more indicates significant risk-adjusted outperformance
- Percent Positive Ratio measures the percentage of all holding periods from six months to five years that produced positive returns
- Batting average measures the percentage of months that the particular investment outperformed the benchmark (S&P 500)

## Important Disclosures Regarding LongRun Capital Risk-Managed Strategies

- Strategies:** Absolute Return and Aggressive Growth (the “Strategies”) are disciplined, rules-based tactical allocation strategies developed by LongRun Capital based on a quantitative methodology known as relative strength. Relative strength involves ranking a selected universe of potential investments based on recent rate of return and then allocating a portfolio to a subset of investments at the top of the performance ranking. The Strategies use a universe of 14 exchange-traded funds (ETFs). These 14 ETFs are ranked on 3-month total return. Absolute Return will hold the top 4 of the 14 ETFs unless one or more of those top 4 has a negative 3-month or 1-month return, in which case that allocation will be held in a cash-equivalent money market fund. This defensive rule may cause Absolute Return to be 100% in cash under adverse market conditions. Aggressive Growth will always hold the top 3 of the 14 ETFs. Holdings for each strategy are reviewed monthly based on 3-month relative strength rankings using month-end performance data. Any changes to the Strategies based on revised rankings are implemented on the first trading day of each month.
- ETF universe:** The 14 ETFs that serve as the selection menu for the Strategies were selected as representative of the global equity and fixed income asset classes that would commonly be used to construct a prudently diversified portfolio. These 14 ETFs will be held constant unless one or more cease trading in the future, in which case we will seek to use a reasonable substitute representing the same asset class. In addition, we may occasionally substitute an equivalent ETF as part of a tax loss harvesting strategy or to reduce transaction expenses. Clients will incur direct expenses associated with the purchase and sale of ETFs as well as the indirect expenses associated with management of the ETFs by their sponsors (e.g. iShares).
- Global Diversified Benchmark:** The S&P 500 is a benchmark commonly used as a proxy for the US equity market. As an alternative, we developed the Global Diversified benchmark to measure the performance of a portfolio that includes all 14 of the ETFs used in the models underlying each of the Strategies. The Global Diversified Benchmark assigns an equal weighting to each of the asset classes represented by the 14 ETFs and rebalances those weightings each month. The resulting portfolio is approximately 70% equity and 30% fixed income with approximately 40% allocated to US equities and 30% allocated to international equities.
- Backtest:** LongRun Capital constructed a backtest of the Strategies using a combination of the 14 ETF universe and mutual funds representing the same asset classes for time periods prior to the inception of the ETFs currently being used. The rule-sets used to determine the month-to-month holdings of the Strategies were applied consistently for the entire backtest period. As a result, there was no manager discretion involved in portfolio management. Backtest returns reflect the deduction of a 1% per annum management fee and an expense ratio of 0.15% per annum designed to approximate the transaction expenses associated with implementation of the Strategies. Underlying data has been obtained from sources believed to be reliable and we are not responsible for errors or omissions. The results achieved in actual accounts may vary from those that would be indicated from backtest results. Backtest performance of the strategies provides no guarantee of future results.
- Composite Results:** LongRun Capital is an independent investment advisory firm that manages assets on a discretionary basis. Clients may elect to have their assets managed on a customized basis and may utilize the Strategies for some or all of their assets managed by LongRun Capital. Unaudited composites for each of the Strategies were started on January 1, 2011, representing the performance of actual accounts assigned to the Strategies. Composites include those accounts with a value of at least \$250,000 fully invested in one of the Strategies. Composite returns are presented net of investment management fees and transaction expenses. LongRun Capital’s top management fee tier is 1% per annum. Internal fees and expenses associated with the ETFs are reflected in the price of each ETF. Dividends, income and capital gains are reinvested on a monthly basis when allocation changes are made. Past performance is no guarantee of future results. Information regarding LongRun Capital’s management fees and the value of assets included in the composite results is available upon request. In addition, LongRun Capital’s disclosure document, Form ADV Part 2A, is available online at [www.adviserinfo.sec.gov](http://www.adviserinfo.sec.gov) or upon request.
