

LongRun Monthly Strategy Summary (2/28/2013)

Commentary

February registered another advance for U. S. equity markets, though not nearly as strong as January. The Dow Jones Industrial Average rose to within 1% of its all-time high, achieved in October 2007, and the S&P 500 got within 3 % of its 2007 peak. International markets were decidedly weaker. Europe (VGK) reversed after eight months of positive returns and ruined February for both of our strategies. Absolute Return was down 0.05% while Aggressive Growth lost 0.59%, worse because it didn't own Absolute Return's fourth holding, Asia-Pacific (EPP), that turned in the month's best result at plus 1.78%.

Those of you who read my mid-month research piece ("*Prepare to Defend Yourselves*") may be surprised to find our strategies fully invested in equities for March. Three things to say about that. First, though Hussman's "syndrome" analysis gave a warning signal ahead of major market catastrophes going back many years, there have been big time lapses between some signals and the subsequent crashes. No one gets the timing just right. Second, our strategies dodged the August 2011 correction predicted by Hussman's April/May signal and would have successfully navigated both the tech crash (2000 – 2002) and credit crisis (2008 – 2009). As a result, we will continue to follow the rules even (perhaps especially) when they seem to dictating risky exposure. Without that discipline, we have nothing to rely on.

Seth Klarman of Baupost Group is one of our generation's most successful investors. In his recent annual letter, he highlights the huge uncertainties we face today as a result of unprecedented central bank intervention and offers the following prescription. "Accepting that we cannot predict the future – i.e., that there will always be unexpected and highly consequential events – is the first step in becoming less fragile and more adaptable. People should be highly skeptical of anyone's, including their own, ability to predict the future, and instead pursue strategies that can survive whatever may occur." Our rules-based strategies have shown the ability to outperform the markets **over** time, even if they won't beat them **every** time. Rules + discipline give me confidence that we can handle whatever might be ahead of us whenever it comes along.

"The best thing about the future is that it comes only one day at a time." – Abraham Lincoln

LongRun Monthly Strategy Summary (2/28/2013)

LongRun Capital Management LLC

LongRun Capital Management LLC is an independent registered investment advisor founded in 2003 to provide investment management services to individuals, families, trusts and charitable entities. Our focus is the active management of investment portfolios to achieve a balance of return, risk and tax-efficiency that meets each client's specific objectives. The Absolute Return and Aggressive Growth strategies are part of a broader array of investment solutions that we make available to our clients depending upon their objectives and risk tolerance. All assets under management are held in separate accounts owned directly by our clients. Our Managing Partner, Jim Carroll, has more than 20 years of financial advisory and investment experience.

Investment Structure:	Separately Managed Accounts
Custodian:	Fidelity Investments
Minimum Investment:	\$1,000,000 (subject to waiver)
Lock-up:	None
Liquidity/Redemption:	Upon client request
Management fee:	1% of first \$5 million; .75% of assets above \$5 million
Disclosure:	Form ADV available upon request

Backtest of LongRun Risk-Managed Strategies

The results shown below represent a backtest of the LongRun Aggressive Growth and Absolute Return strategies from January 1, 1996 through December 31, 2010. Additional information is available upon request. Please review the important disclosures below and on the next page.

	S&P 500 (SPY)	Global Diversified ¹	Aggressive Growth ²	Absolute Return ³
Compound Annual Return ⁴	6.6%	10.3%	17.2%	13.7%
Ending Value per \$1 ⁵	\$2.62	\$4.34	\$10.84	\$6.84
Multiple of S&P 500	NA	1.7	4.1	2.6
Standard Deviation ⁶	16%	15%	18%	13%
Maximum Drawdown ⁷	-51%	-45%	-35%	-13%
Overall Correlation ⁸	100%	85%	56%	46%
Up Market Correlation ⁹	100%	84%	56%	53%
Down Market Correlation ⁹	100%	88%	47%	21%
Up Capture ¹⁰	100%	90%	107%	74%
Down Capture ¹⁰	100%	76%	59%	37%
Up/Down Ratio ¹¹	1.0	1.2	1.8	2.0
Percent Positive Ratio ¹²	62%	86%	91%	94%
Positive Monthly Returns	60%	64%	64%	68%
Batting Average ¹³	NA	58%	60%	56%

- Global Diversified is a benchmark that equally weights the 14 ETFs used in the risk-managed strategies, resulting in a global portfolio that is a 70/30 mix of equity and fixed income
- Aggressive Growth is a risk-managed strategy designed to achieve higher long-term returns for clients able to tolerate a significant amount of risk
- Absolute Return is a risk-managed strategy designed to strictly limit investment risk while producing attractive expected returns
- Annualized compound return from January 1, 1996 through December 31, 2010
- The estimated value of \$1 invested on January 1, 1996 through December 31, 2010
- Standard deviation is a statistical measure of the dispersion of investment returns around the average return; a higher standard deviation is commonly viewed as indicative of greater risk
- Drawdown is a measure of the worst peak to trough decline in portfolio value over a measured period; a higher drawdown is indicative of greater risk
- Correlation measures the degree to which one set of returns moves up and down in sync with a benchmark set of returns; the S&P 500 is used as the benchmark for this analysis
- Upmarket correlation analyzes only periods when benchmark returns are positive; downmarket vice versa; upmarket correlation higher than downmarket correlation indicates better risk-adjusted returns
- Up capture measures the degree to which an investment matches benchmark returns in an upmarket and vice versa for down capture
- An Up/Down Ratio greater than 1 indicates risk-adjusted outperformance versus the benchmark; a ratio of 2 or more indicates significant risk-adjusted outperformance
- Percent Positive Ratio measures the percentage of all holding periods from six months to five years that produced positive returns
- Batting average measures the percentage of months that the particular investment outperformed the benchmark (S&P 500)

Important Disclosures Regarding LongRun Capital Risk-Managed Strategies

- Strategies:** Absolute Return and Aggressive Growth (the “Strategies”) are disciplined, rules-based tactical allocation strategies developed by LongRun Capital based on a quantitative methodology known as relative strength. Relative strength involves ranking a selected universe of potential investments based on recent rate of return and then allocating a portfolio to a subset of investments at the top of the performance ranking. The Strategies use a universe of 14 exchange-traded funds (ETFs). These 14 ETFs are ranked on 3-month total return. Absolute Return will hold the top 4 of the 14 ETFs unless one or more of those top 4 has a negative 3-month or 1-month return, in which case that allocation will be held in a cash-equivalent money market fund. This defensive rule may cause Absolute Return to be 100% in cash under adverse market conditions. Aggressive Growth will always hold the top 3 of the 14 ETFs. Holdings for each strategy are reviewed monthly based on 3-month relative strength rankings using month-end performance data. Any changes to the Strategies based on revised rankings are implemented on the first trading day of each month.
- ETF universe:** The 14 ETFs that serve as the selection menu for the Strategies were selected as representative of the global equity and fixed income asset classes that would commonly be used to construct a prudently diversified portfolio. These 14 ETFs will be held constant unless one or more cease trading in the future, in which case we will seek to use a reasonable substitute representing the same asset class. In addition, we may occasionally substitute an equivalent ETF as part of a tax loss harvesting strategy or to reduce transaction expenses. Clients will incur direct expenses associated with the purchase and sale of ETFs as well as the indirect expenses associated with management of the ETFs by their sponsors (e.g. iShares).
- Global Diversified Benchmark:** The S&P 500 is a benchmark commonly used as a proxy for the US equity market. As an alternative, we developed the Global Diversified benchmark to measure the performance of a portfolio that includes all 14 of the ETFs used in the models underlying each of the Strategies. The Global Diversified Benchmark assigns an equal weighting to each of the asset classes represented by the 14 ETFs and rebalances those weightings each month. The resulting portfolio is approximately 70% equity and 30% fixed income with approximately 40% allocated to US equities and 30% allocated to international equities.
- Backtest:** LongRun Capital constructed a backtest of the Strategies using a combination of the 14 ETF universe and mutual funds representing the same asset classes for time periods prior to the inception of the ETFs currently being used. The rule-sets used to determine the month-to-month holdings of the Strategies were applied consistently for the entire backtest period. As a result, there was no manager discretion involved in portfolio management. Backtest returns reflect the deduction of a 1% per annum management fee and an expense ratio of 0.15% per annum designed to approximate the transaction expenses associated with implementation of the Strategies. Underlying data has been obtained from sources believed to be reliable and we are not responsible for errors or omissions. The results achieved in actual accounts may vary from those that would be indicated from backtest results. Backtest performance of the strategies provides no guarantee of future results.
- Composite Results:** LongRun Capital is an independent investment advisory firm that manages assets on a discretionary basis. Clients may elect to have their assets managed on a customized basis and may utilize the Strategies for some or all of their assets managed by LongRun Capital. Unaudited composites for each of the Strategies were started on January 1, 2011, representing the performance of actual accounts assigned to the Strategies. Composites include those accounts with a value of at least \$250,000 fully invested in one of the Strategies. Composite returns are presented net of investment management fees and transaction expenses. LongRun Capital’s top management fee tier is 1% per annum. Internal fees and expenses associated with the ETFs are reflected in the price of each ETF. Dividends, income and capital gains are reinvested on a monthly basis when allocation changes are made. Past performance is no guarantee of future results. Information regarding LongRun Capital’s management fees and the value of assets included in the composite results is available upon request. In addition, LongRun Capital’s disclosure document, Form ADV Part 2A, is available online at www.adviserinfo.sec.gov or upon request.
